

## The County of Lennox and Addington Partners With WorkTech Inc. to Migrate From Legacy Asset Management System

**May 19, 2010, Canada, Ontario, Grimsby – The County of Lennox and Addington, Napanee, Ontario** has chosen WorkTech Inc's Asset Manager Foundation to maintain a consolidated inventory of its Asset Inspections and Improvement History, and enable Lifecycle Analysis through Average Annual Costing and Performance Modeling.

The County of Lennox and Addington's legacy system used by management to organize information relating to Road and Bridge conditions was scheduled to be discontinued and would no longer be supported by the Legacy System Vendor. The County was challenged with finding a database application that could migrate and preserve the historical data while positioning the County with a scalable solution capable of future integration requirements.

Through the use of WorkTech's Integration Manager Extender, the County was successful with their inventory data migration from the legacy system into WorkTech's Asset Manager Foundation including a complete history of Capital Improvements and costs. Supported by a software application that is easy to view, edit, and use, the County is better positioned to maintain a database of Historical Inspections and asset attribute changes while reporting on their Asset Lifecycle Needs.
